

COMMUNITY HEALTH NURSING I

OVERVIEW OF CHN

**COMMUNITY HEALTH NURSING AS
A FIELD OF NURSING PRACTICE**

Overview of Public Health Nursing in the Philippines

- **A. Definition and Focus**
 - **1. Public Health**
 - **2. Community Health**
 - **3. Public Health Nursing**
 - **4. Community Health Nursing (CHN)**
 - **5. Standards of Public Health Nursing in the Philippines**
 - **6. Roles and Responsibilities of a Community Health Nurse**

COMMUNITY HEALTH NURSING: AN OVERVIEW

- What is a community?
- A group of people with common characteristics or interests living together within a territory or geographical boundary
- Place where people under usual conditions are found

PUBLIC HEALTH

- According to C.E. Winslow (3Ps)
- *“The art and science of preventing disease, prolonging life and promoting health through the organized efforts of society.”*

HEALTH (WHO)

“State of complete physical, mental, and social well-being, not merely the absence of diseases or infirmity.”

COMMUNITY HEALTH

- It is a major field of study within the medical and clinical sciences which focuses on the maintenance, protection, and improvement of the health status of population groups and communities.
- It is a field of public health that focuses on studying, protecting, or improving health within a community.
- It does not focus on a group of people with the same shared characteristics, like age or diagnosis, but on all people within a geographical location or involved in a specific activity.

What is community health?

- Part of paramedical and medical intervention / approach which is concerned on the health of the whole population
- Aims:
 - 1. health promotion
 - 2. disease prevention
 - 3. management of factors affecting health

Public Health Nursing

- WHO Expert Committee of Nursing

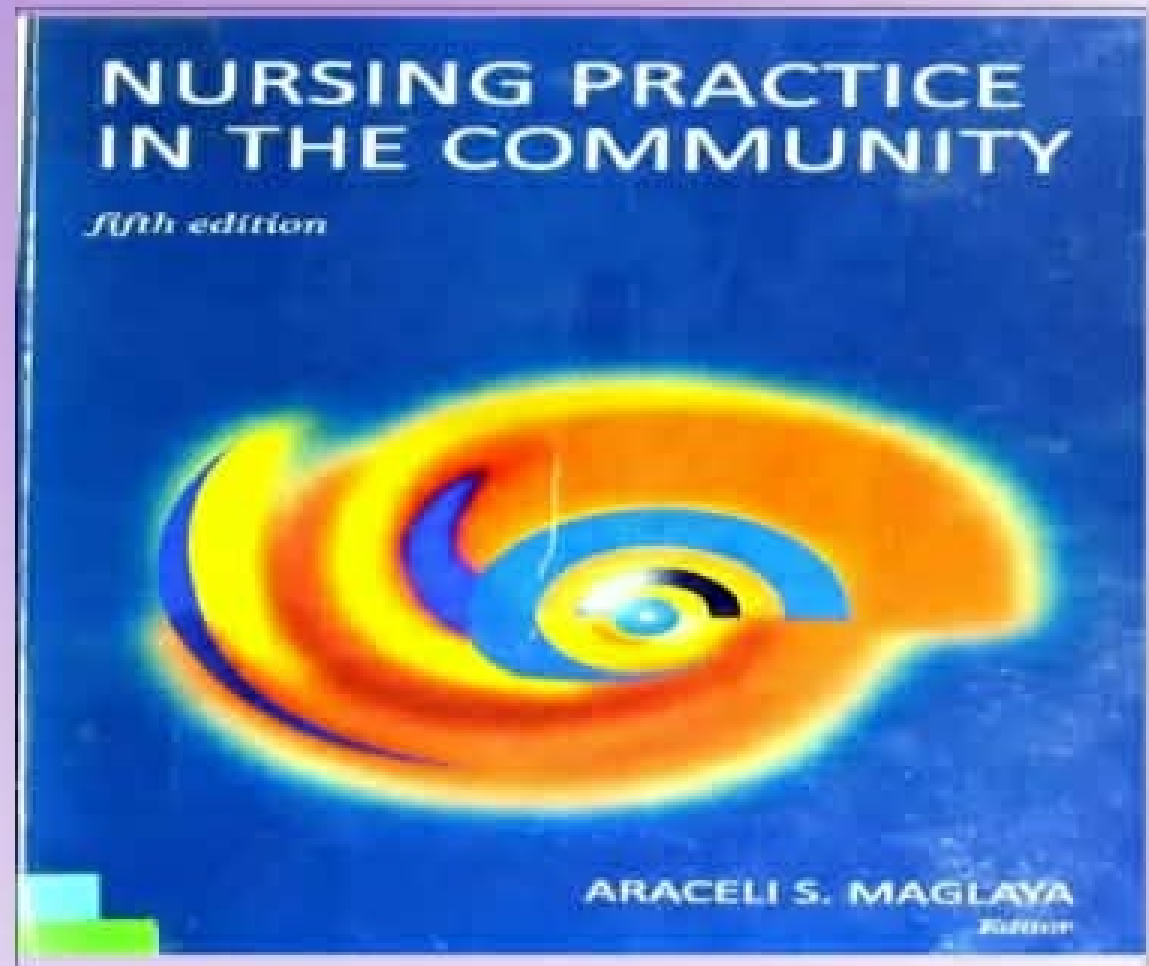

➤ *“Special field of nursing that combines the skills of nursing, public health, and some phrases of social assistance and functions as part of the total public health program for the promotion of health, the improvement of the conditions in the social and physical environment, rehabilitation of illness and disability.”*

What is Community Health Nursing?

"The utilization of the nursing process in the different levels of clientele- individuals, families, population groups and communities, concerned with the promotion of health, prevention of disease and disability and rehabilitation."

-Maglaya, et al

COMMUNITY HEALTH NURSING

- It is the synthesis of nursing and public health practice applied to **promote and protect the health of population**. It combines all the basic elements of professional, clinical nursing with public health and community practice.

10 Essential Functions of Public Health

1. Monitor health
2. Diagnose and investigate
3. Inform, educate, empower
4. Mobilize community partnership
5. Develop policies
6. Enforce laws
7. Link to and provide care
8. Assure a competent workforce
9. Evaluate
10. Research

A. Primary Health Care (PHC)

- 1. Brief History**
- 2. Legal Basis**
- 3. Definition**
- 4. Goals**
- 5. Elements**
- 6. Principles and Strategies**

A. Levels of Prevention

BRIEF HISTORY

Primary Health Care

May 1977. The 30th World Health Assembly adopted resolution which decided that the main social target of governments and of WHO should be the attainment by all the people of the world by the year 2000 a level of health that will permit them to lead a socially and economically productive life.

BRIEF HISTORY

- **September 6-12, 1978.** International Conference in PHC was held in this year at Alma Ata, USSR (Russia)
- **October 19, 1979.** The President of the Philippines (Ferdinand Marcos) issued Letter of Instruction (LOI) 949 which mandated the then Ministry of Health to adopt PHC as an approach towards design, development, and implementation of programs which focus health development at the community level.

LEGAL BASIS

October 19, 1979

Letter of Instruction (LOI) 949, the legal basis of PHC was signed by Pres. Ferdinand E. Marcos, which adopted PHC as an approach towards the design, development and implementation of programs focusing on health development at community level.

Definition of PHC

World Health Organization (WHO)

The WHO defines **Primary Health Care** an essential health care made universally acceptable to individuals and families in the community by means acceptable to them through their full participation and at a cost that the community and country can afford at every stage of development.

GOALS OF PHC

The goal of primary health care is better health for all. WHO has identified five key elements to achieving that goal:

- Reducing exclusion and social disparities in health (universal coverage reforms);
- Organizing health services around people's needs and expectations (service delivery reforms);
- Integrating health into all sectors (public policy reforms);
- Pursuing collaborative models of policy dialogue (leadership reforms); and
- Increasing stakeholder participation.

Eight (8) ELEMENTS OF PHC

1. Education for Health

This is one of the potent methodologies for information dissemination. It promotes the partnership of both the **family members and health workers in the promotion of health as well as prevention of illness.**

2. Locally Endemic Disease Control

The control of endemic disease focuses on the prevention of its occurrence to reduce morbidity rate.

Example: Malaria control and Schistosomiasis control

ELEMENTS OF PHC

3. Expanded Program on Immunization

This program exists to control the occurrence of preventable illnesses especially of children below 6 years old. Immunizations on poliomyelitis, measles, tetanus, diphtheria and other preventable disease are given for free by the government and ongoing program of the DOH

ELEMENTS OF PHC

4. Maternal and Child Health and Family Planning

The mother and child are the most delicate members of the community. So the protection of the mother and child to illness and other risks would ensure good health for the community. The goal of Family Planning includes **spacing of children and responsible parenthood.**

ELEMENTS OF PHC

5. Environmental Sanitation and Promotion of Safe Water Supply

Environmental Sanitation is defined as the study of all factors in the man's environment, which exercise or may exercise deleterious effect on his well-being and survival. Water is a basic need for life and one factor in man's environment. Water is necessary for the maintenance of healthy lifestyle. **Safe Water and Sanitation** is necessary for basic promotion of health.

ELEMENTS OF PHC

6. Nutrition and Promotion of Adequate Food Supply

One basic need of the family is food. And if food is properly prepared then one may be assured healthy family. There are many food resources found in the communities but because of faulty preparation and lack of knowledge regarding **proper food planning, Malnutrition** is one of the problems that we have in the country.

ELEMENTS OF PHC

7. Treatment of Communicable Diseases and Common Illness

The diseases spread through direct contact pose a great risk to those who can be infected. Tuberculosis is one of the communicable diseases continuously occupies the top ten causes of death. Most communicable diseases are also preventable. The Government focuses on the prevention, control and treatment of these illnesses.

ELEMENTS OF PHC

8. Supply of Essential Drugs

This focuses on the information campaign on the utilization and acquisition of drugs. In response to this campaign, the GENERIC ACT of the Philippines is enacted.

It includes the following drugs: Cotrimoxazole, Paracetamol, Amoxycillin, Oresol, Nifedipine, Rifampicin, INH (isoniazid) and Pyrazinamide, Ethambutol, Streptomycin, Albendazole, Quinine

PRINCIPLES AND STRATEGIES OF PHC

PRINCIPLES OF PHC

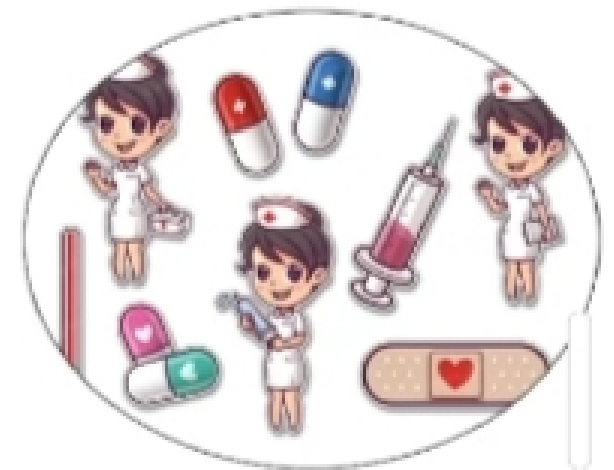

1. 4A's = Accessibility, Availability, Affordability and Acceptability, Appropriateness of health services.

The health services should be present where the supposed recipients are. They should make use of the available resources within the community, wherein the focus would be more on health promotion and prevention of illness.

PRINCIPLES OF PHC

2. Community Participation

Community participation is the heart and soul of primary health care.

PRINCIPLES OF PHC

3. People are the center, object and subject of development.

- . Thus, the success of any undertaking that aims at serving the people is dependent on people's participation at all levels of decision-making; planning, implementing, monitoring and evaluating. Any undertaking must also be based on the people's needs and problems (PCF, 1990)

PRINCIPLES OF PHC

- . Part of the people's participation is the partnership between the community and the agencies found in the community; social mobilization and decentralization.

PRINCIPLES OF PHC

- . In general, health work should start from where the people are and building on what they have.

Example: Scheduling of Barangay Health Workers in the health center

PRINCIPLES OF PHC

Barriers of Community Involvement

- . Lack of motivation
- . Attitude
- . Resistance to change
- . Dependence on the part of community people
- . Lack of managerial skills

PRINCIPLES OF PHC

4. Self-reliance

Through community participation and cohesiveness of people's organization they can generate support for health care through social mobilization, networking and mobilization of local resources. Leadership and management skills should be develop among these people. Existence of sustained health care facilities managed by the people is some of the major indicators that the community is leading to self reliance.

PRINCIPLES OF PHC

5. Partnership between the community and the health agencies in the provision of quality of life.

Providing linkages between the government and the non-government organization and people's organization.

PRINCIPLES OF PHC

6. Recognition of interrelationship between the health and development

- **Health** is defined as not merely the absence of disease. Neither is it only a state of physical and mental well-being. Health being a social phenomenon recognizes the interplay of political, socio-cultural and economic factors as its determinant. Good Health therefore, is manifested by the progressive improvements in the living conditions and quality of life enjoyed by the community residents

PRINCIPLES OF PHC

- . **Development** is the quest for an improved quality of life for all. Development is multidimensional. It has political, social, cultural, institutional and environmental dimensions (Gonzales 1994). Therefore, it is measured by the ability of people to satisfy their basic needs.

PRINCIPLES OF PHC

7. Social Mobilization

It enhances people's participation or governance, support system provided by the government, networking and developing secondary leaders.

PRINCIPLES OF PHC

8. Decentralization

This ensures empowerment and that empowerment can only be facilitated if the administrative structure provides **local level political structures** with more substantive responsibilities for development initiators. This also facilitates proper allocation of budgetary resources.

LEVELS OF PREVENTION

PRIMARY LEVEL <i>Health Promotion and Illness Prevention</i>	SECONDARY LEVEL <i>Prevention of Complications thru Early Dx and Tx</i>	TERTIARY LEVEL <i>Prevention of Disability, etc.</i>
Provided at – ▶ Health care/RHU ▶ Brgy. Health Stations ▶ Main Health Center ▶ Community Hospital and Health Center ▶ Private and Semi-private agencies	▶ When hospitalization is deemed necessary and referral is made to emergency (now district), provincial or regional or private hospitals	▶ When highly-specialized medical care is necessary ▶ referrals are made to hospitals and medical center such as PGH, PHC, POC, National Center for Mental Health, and other gov't private hospitals at the municipal level
